COURSE NAME:
MULTIDIMENSIONAL INTERACTIONS WITH THE WORLD

Assignment Title:
CURRENT EVENT ANALYSIS

ATLANTIC INTERNATIONAL UNIVERSITY
July/2022

Introduction

In a moment we are facing in our Country a preparation of the elections and the movement around that even is very great. People is very busy of that the 8 Parties admitted to the race of the power and the highchair of the country is frenetic.

We are seeing in every Regions the dispute between population defending their Parties and their ideals to take part during the next mandate which starts from 2022 and ends in 2027.

The one we can see is different Electoral register in the public medias and on the internet. There is a lot of indictment between the concurrent.

We are coming from the long war time in the country that stopped in 2002 between the 2 major parties UNITA and MPLA, and in the time of the war it happened many things like destruction of the minds and the infrastructures.

We have a Party leading the country for many years but is not caring the Country with responsibility, do not care the population in the dimension of the people wait from them, there is no schools enough for the population which could open the mind of the population to engage themselves in the development of the country.

At the same time, we have another Party which tells everything bad the first is doing but the first one eudaemony the second one telling and creating false testimonies in the media to unbelieve them in the middle of the population.

The first one controls the media, controls the money of the Government and also control the minds, the better thinkers they pay them to be speechless, nobody may arouse the population about their bad government, sometimes they even kill people reversing their ideals.

They are the leaders of the high corruption in the country and the bad conditions of the population in the Country, they do not live freely in the country, imagine that we have people in our country that prefer to live in other countries than to live in Angola because they can find a good environment there than here inside of the Country.

We have many people who go to others country to look for better conditions of education that prefer to live there in low conditions doing precarious job earning bad wages than to come here and live what most people is living.

In the truth people are looking for peace, what they do not want is to feel like strangers in the mother country.

Even me I feel better in our neighbor country than when I am in my own, there we breath wings of peace.

Body of Assignment

Write essay, exam answers or multiple-choice questions.

Current Event Analysis: Take a current event directly linked to your major. Analyze the interactions between people, organizations and the environment connected to the event. You can use newspapers, magazines, the Internet, etc.

1. Experiences

After a civil war That ended in 1991 which started at 1975, those are the 5th elections: 1992, 2008, 2012, 2017 and 2022.

In the first election the processes were not finished, MPLA won UNITA in the first election, but Dos Santos did not win Savimbi.

In 1993 they start again fighting MPLA and UNITA, the bigger part of the country was occupied by the UNITA party, it was a very long period of hanger and confusion in the country, because that was affecting directly the life of people living in the towns. In the war that started at 1991 people did not feel it because the war happens in the bushes.

Not for long time it happens in the towns.

The first war in the side off UNITA was the South African Army force helping them and in MPLA side was the CUBA and URSS army. The political system installed in the country was a Communism. The difference between the two parties was that the MPLA was following the Communism System and The UNITA the Democracy. Even now we can see the difference, the President of MPLA from Dos Santos still now João Lourenco in the Elections of their Parties they go alone, without any other proposal in the other parties they elect several candidates to be voted.

That war stopped a bit in 1996 and in 1998 they put their selves in war again. That war finished with the dead of the UNITA Leader Savimbi in 2002. From there was not war but the relation between UNITA and MPLA was not recover, MPLA party feels that their always bigger than UNITA.

The question that in the time of the war it seemed that people was living better than now in the peace time, they're not better the lifestyle and the corruption in the country is taking large paths.

2. Meetings

For us citizens we can easily verify that there is no willing in the side of MPLA to leave the power and be in the opposite side in Angola, the one they want is to be in the power I do not know until when.

When they organize their meeting, we can see the difference of the speeches among them the MPLA likes to tell people false things to the people not approach the UNITA party, imagine that the war was finished in 2002 but MPLA everywhere says that if UNITA win the war people will suffer and will be in a new war. But the reality is that the MPLA is the one who has guns and army in the moment.

The question of the people is why they menace about war only in the election time. It means automatically that there are afraid of UNITA taking the main chair of the country. They organized a system that is not favorable for the population: they do not give a better level of education for the population, they do not upgrade the health system, they do not invest in agriculture, they do not invest in the net of electricity and water, they do not invest in the cleaning of the towns, they do not stop with the corruption, people are suffering.

What happens from the long 1992 is that the opposition parties say that the elections are not fair, we understand that it can be because they control all the offices in the Government, and they can manipulate them as they wish.

Another seem not less important is that the meeting of the MPLA they put it in the public television but if we want to know about the other Parties, we must get them from the internet, they do not want others to be visible.

But people year after year they are growing and they do not accept the lies of the party in the power like in the past, their minds are changing, and the suffering is opening their eyes.

3. Promises

The proposal for the next mandate is deferent: the UNITA is nearer of the willing of the population and the popularity of the because they elaborated a proposal of what the MPLA could do for the future of the country, and they also made a joint venture with the other parties in the opposition to win the MPLA and be Government.

The MPLA party continue to promise things they start to promise in 1961 when they were created and never did still to now. They never do the balance of the one they promise, the truth is that in that game the Governors year after year they are becoming riches and the population poor out of control.

People now are apposing the Party in the Government because they want to see another reality and they like the President of UNITA because was a good Deputy always defending in the Assembly the problems of the population.

4. Errors

The main error that I consider in that process is that the war did not finish by negotiations it finished with war and in that one the one who defeated another feel that is the powerful and nobody may stay in the top of him.

It is the reason why when they feel weak, they come with the stories of the war, because it is the only thing they can use to be on the top of the other guys.

The integration of the people that came from UNITA side from the start was not the better one, they put the soldiers in the Army but others they leave them in their own risky, but when they try to get job, they do not allow them to work.

To work in public organizations, you may be from MPLA, if they discover that you are not, they create things to put you out of there.

It is a sorrow condition, and those people are fighting greatly to win the life in small business and agriculture in less plots of lands.

5. Vision for the future

It is true that we can not see hope with the MPLA in the power because they did already what were in their hands to do, the promises there are not putting in practice. Their trying to get the attention of the population but when they need people to elect them, they have some small interaction with them, but when they attain the power, they remember only their friend and families to sacrifice the money of the country in their own benefit.

The MPLA think only in the power and in the money, we know that there are not good for the people, they are sacrificing for their own beneficial.

The UNITA has a good plan for the future of the country, but people is afraid because they never be in the power, we do not know how they can manager, but we need also to experiment another shape of seeing the country and we are engaged to give positive power to UNITA to win the election to see how it will be.

They have a good proposal mainly in accordance with the challenges of the Education, Healthy, Public Management, Agriculture, Salaries and Cleaning Environment.

The one who think to educate the people is ones who think in the future of the population, they want clearly the development of the citizens, they hope that to work with literacy people they can reach better goals than the contrary.

I imagine that if they think truly to develop the business environment in Angola will attract foreigner countries to come and invest in our country without risks.

What we need is to get a prepared population able to change the mindset of the population and put them in the way of the development.

6. Better Life

People need employment, and to reinforce the opportunities for the employ in our country we need ones Government which think in the industry, our industry is very weak, we have natural resources to produce many things in Angola but our Governor like only to extract but not to transform.

If ones begin to transform it is a short way to give employ to a great majority of people because they can put many people working and better the life of the people.

If they put functional factories in a place, they are also able to develop the place and to better the life condition of the families which are the primary center of the education. If families are happy, the country is also happy.

7. Better Salaries

Labors in Angola need to work for a good salary, imagine that a teacher in high lever earns per month only USD 500,00 and the minimum salary is USD 50,00 per month, when you receive salary, you be in a maximum confusion you do not know if you will buy food, dress for you or for the children.

The UNITA program is promising a minimum salary of USD 400,00 and we think that it is a great bit, the program of the MPLA is telling people that they will better the salaries without a range of time or value.

Imagine, from 2017 they did not touch in the salaries, the inflation was growing, prices growing but salary which is good to buy thing nothing. They increased only 10% in June 2022; it is the promises we can face if we vote again the MPLA party. And it is not the only thing which bad many other things they are not serious.

They like to joke with people. The labors are working for the Government, and they are being paid as they are working for free or near to it.

Families need wages that make them able to fulfill their primaries need like food, house, dress and to get amusement and save a little money month after month to prepare the future. If ones get a good education, it means that even the children can help fathers with their wages when fathers become elders.

If the people are not educated it is not possible to think in people who can support each other or to develop the source of rent for each family at all.

The problem of thinking only in the pocket of the governors is a great deal of people are being sacrificed by a minority.

The source of corruption in the country is mainly based in the weak salaries they pay others, because they need more money to supply their families comparing on the salaries they receive.

8. What populations Expects

In the moment people is waiting that the elections will be the opportunity to change their lives and to be the way to grant the peace.

Conclusion

In conclusion I can say that the better moments will come it is the desire of the people and in one time God will respond the payers for the suffering people.

Those who are in power may consider that they pass, the power passes but the way they deal with others will remain forever.

Never sacrifice people to supply a need of a singular person.
